Computer Networks and the Internet

Raj Jain

Washington University in Saint Louis Saint Louis, MO 63130 Jain@wustl.edu

Audio/Video recordings of this lecture are available on-line at:

http://www.cse.wustl.edu/~jain/cse473-21/

http://www.cse.wustl.edu/~jain/cse473-21/

©2021 Raj Jain

- 1. What is Internet?
- 2. Switching: Circuit vs. Packet
- 3. Edge vs. Core
- 4. Network Performance Measures: Delay, Loss, Throughput
- 5. Protocol Layers
- 6. Network Security
- 7. History

Note: This class lecture is based on Chapter 1 of the textbook (Kurose and Ross) and the slides provided by the authors.

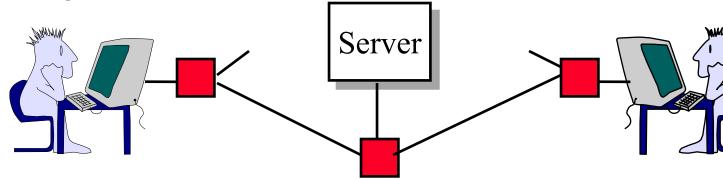

http://www.cse.wustl.edu/~jain/cse473-21/

What is a Network?

□ Network: Enables data transfer among nodes

- Generally heterogeneous nodes
- ▹ More than two nodes
- > E.g., Your home or office network

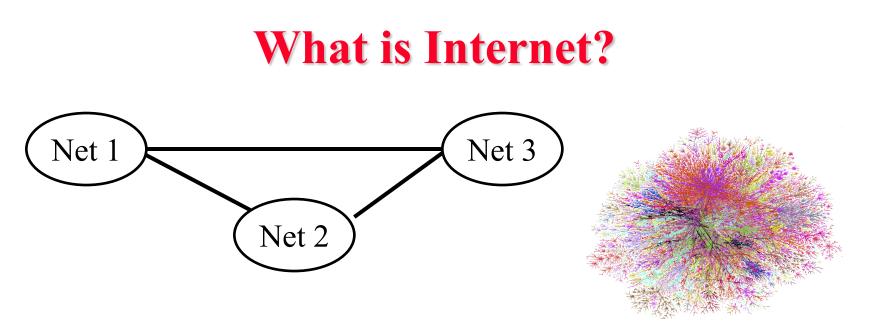

- **Communication**: Two nodes.
 - > Link level electrical issues.

- End Systems: Systems that are sinks or sources of data, e.g., Desktops, Laptops, Servers, Printers, Cell Phones, etc.
- □ Intermediate Systems: Systems that forward/switch data from one link to another, e.g., routers, switches
- □ **Hosts**: End Systems
- **Gateways**: Routers
- Servers: End Systems that provide service, e.g., print server, storage server, Mail server, etc.
- **Clients**: End systems that request service
- Links: Connect the systems. Characterized by transmission rate, propagation delay

©2021 Raj Jain

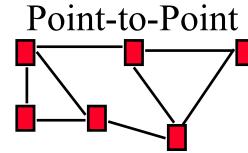

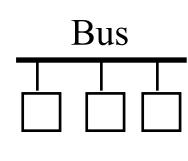

- Internet = Inter-Network = Network connecting networks
- Approximately 1.05B hosts on Internet in 2016.
- □ ISP: Internet Service Provider.
 - Provide access to Internet.
 - Felecommunications (Telephone) Companies, AT&T, Verizon, Comcast, ...
 - Coffee Shops (Wi-Fi)

©2021 Raj Jain

Types of Networks

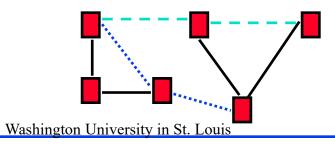

D Point to point vs. Broadcast

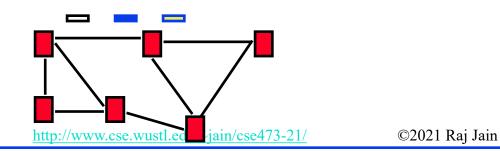

□ Circuit switched vs. packet switched

- □ Circuit: A path (circuit) is setup before transmission. All bits follow the same path, e.g., Phone
- □ **Packet:** Packets of bits are forwarded individually

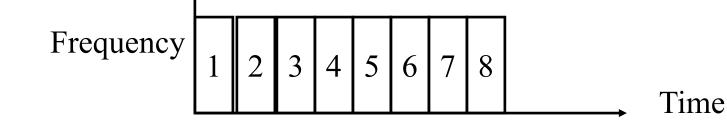

Star

Multiplexing

□ How multiple users can share a link?

Time Division Multiplexing (TDM)

□ Frequency Division Multiplexing (FDM)

Frequency Time

• Other multiplexing methods will be covered as needed.

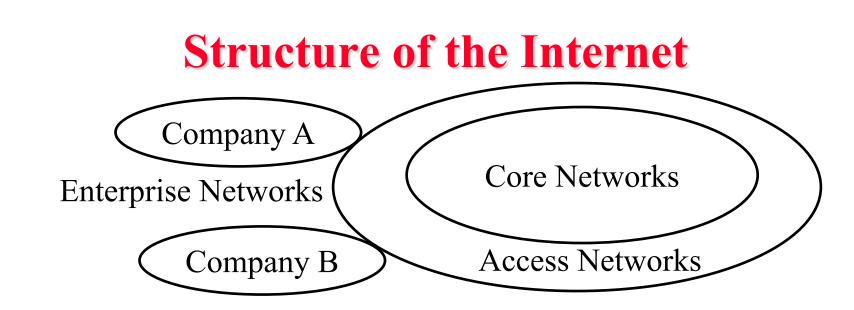

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse473-21/

Types of Networks (Cont)

- Local Area Networks (LAN): 0-2 km, Single Ownership Metropolitan Area Networks (MAN) 2-50 km, Wide Area Networks (WAN) 50+ km
 - > Originally LAN/MAN/WAN technologies were different
 - > Now they are all same
- □ Telecom Networks:
 - > Access: Between subscriber and the service provider
 - Metro: Covering a city
 - > Core: Between cities

- Enterprise/Home Networks: Stub Networks. Privately owned ⇒ Not owned by ISP e.g., WUSTL network: Ethernet and WiFi
- Access Network: Enterprise/Users to ISP (in the city) WiFi, 3G/4G, DSL
- **Core** Network: ISP's network (between city): Optical Fiber

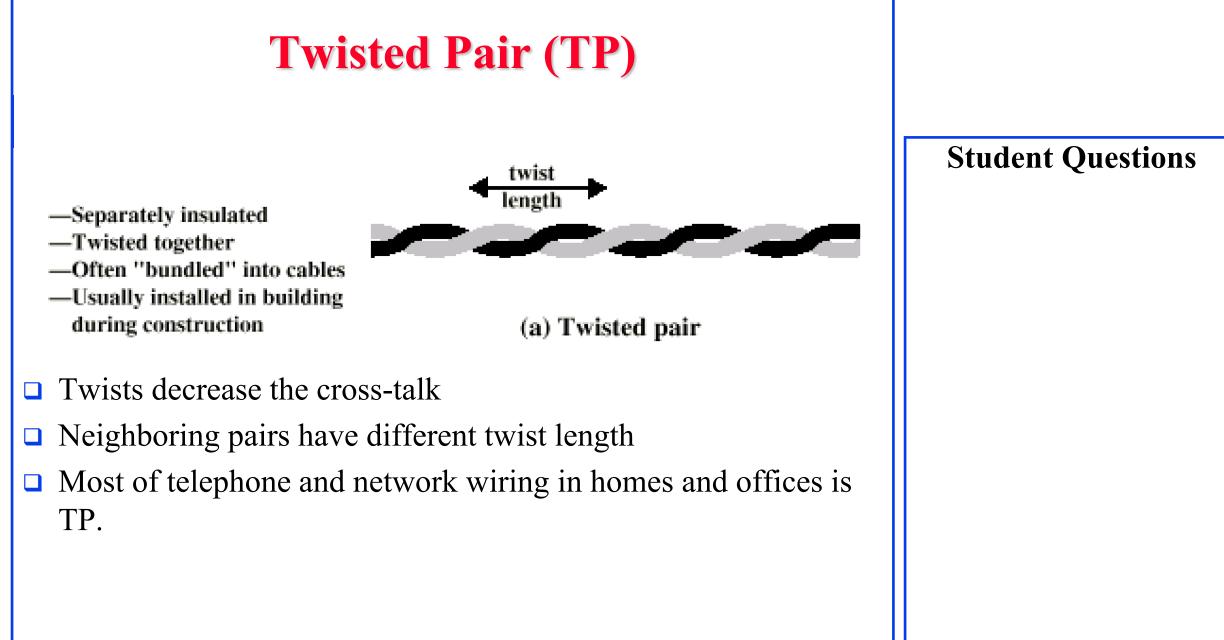

Transmission Media

Guided:

- > Twisted Pair
- Coaxial cable
- > Optical fiber

Unguided:

- > Microwave
- ➤ Satellite
- > Wireless

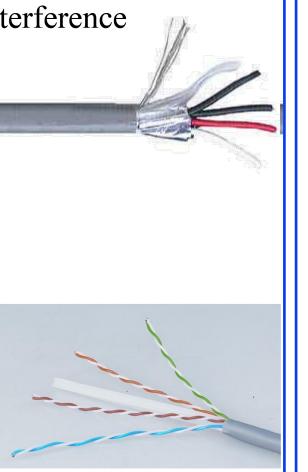

Shielded and Unshielded TP

□ Shielded Twisted Pair (STP)

- > Metal braid or sheathing that reduces interference
- > More expensive
- > Harder to handle (thick, heavy)
- > Used in token rings

□ Unshielded Twisted Pair (UTP)

- > Ordinary telephone wire
- > Cheap, Flexible
 - \Rightarrow Easiest to install
- > No shielding
 - \Rightarrow Suffers from external interference
- > Used in Telephone and Ethernet

Student Questions

©2021 Raj Jain

UTP Categories

Cat 3

- > Up to 16MHz
- > Voice grade found in most offices
- > Twist length of 7.5 cm to 10 cm

Cat 4

> Up to 20 MHz. Not used much in practice.

Cat 5

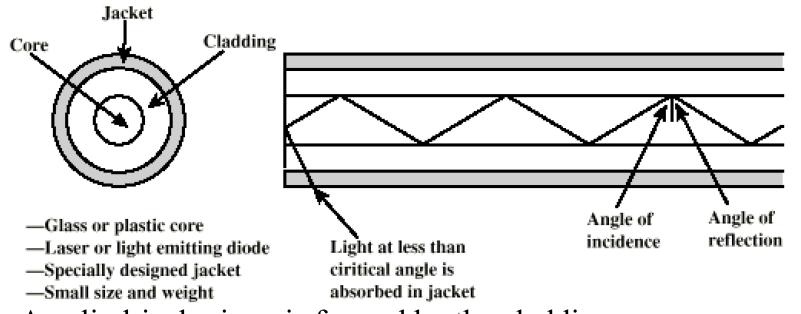

- > Up to 100MHz
- > Used in 10 Mbps and 100 Mbps Ethernet
- > Twist length 0.6 cm to 0.85 cm
- □ Cat 5E (Enhanced), Cat 6, Cat 7, ...

Student Questions

©2021 Raj Jain

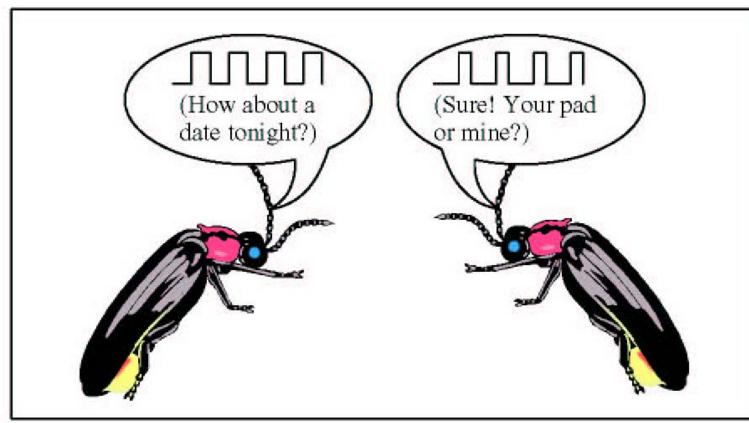

Optical Fiber

□ A cylindrical mirror is formed by the cladding

- □ The light wave propagate by continuous reflection in the fiber
- □ Not affected by external interference \Rightarrow low bit error rate
- □ Fiber is used in all long-haul or high-speed communication
- □ Infrared light is used in communication

Optical Communication...History

Student Questions

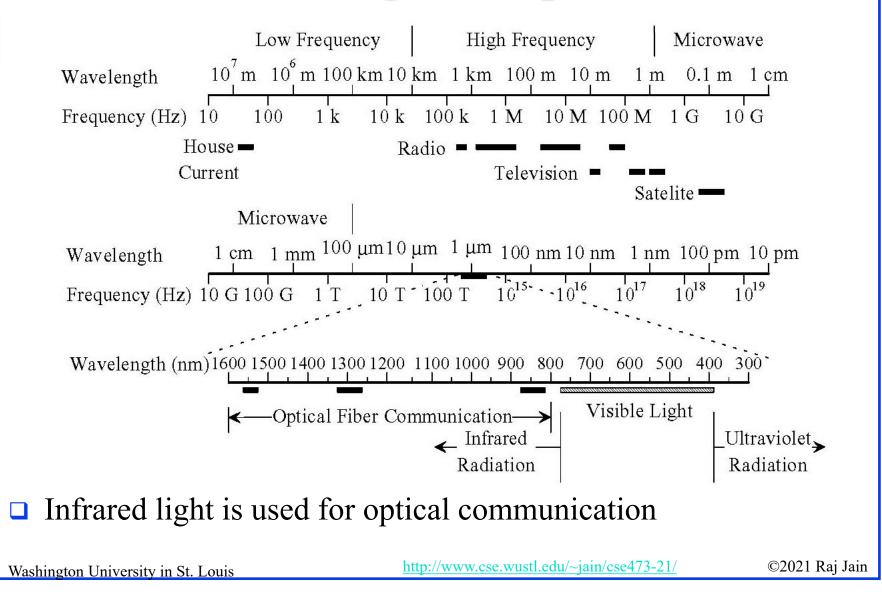

Fireflies use pulse-width modulation.

Washington University in St. Louis

Electromagnetic Spectrum

Homework 1A: Networking Media

- [6 points] Which networking media will you use for the following applications and why?
- 1. Very large file transfer at home
- 2. High-speed multiple channel video transmission at office
- 3. News reading while traveling in a car
- Note: Do not write the name of the protocol. Write the name of the media and justify.

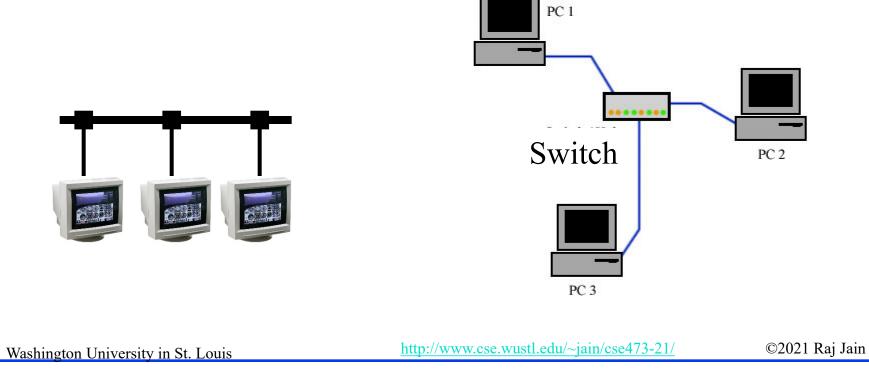

Network Edge: Enterprise Networks

- 1. Ethernet
- 2. Wi-Fi

Ethernet

- □ Uses UTP (Unshielded Twisted Pair)
- **1** 10 Mbps, 100 Mbps, 1 Gbps, 10 Gbps
- Originally bus, now point-to-point (Star) topology

Wi-Fi

 IEEE 802.11 (Institution of Electrical and Electronic Engineers)

□ Uses 2.4 GHz and 5.8 GHz

Access Networks

- 1. DSL (Digital Subscriber Line)
- 2. Cable
- 3. Fiber-To-The-Home
- 4. Wi-Fi
- 5. LTE (Long Term Evolution)

Student Questions

http://www.cse.wustl.edu/~jain/cse473-21/

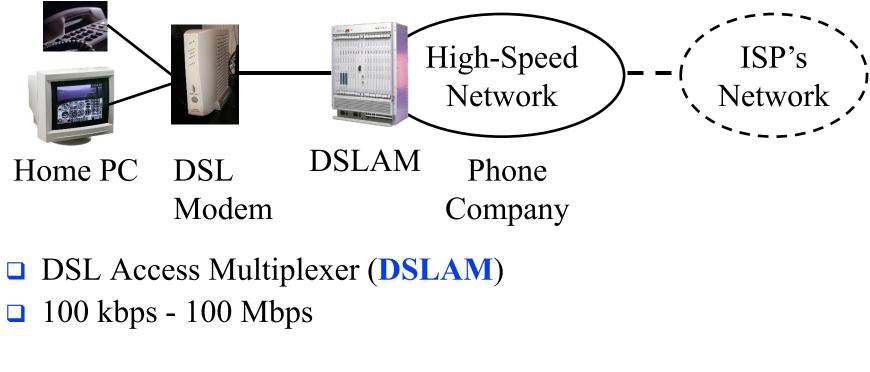

©2021 Raj Jain

DSL

Digital Subscriber Line (DSL)

Can transmit very high data rates on phone wire using special equipment at the phone company allowing higher frequency signals

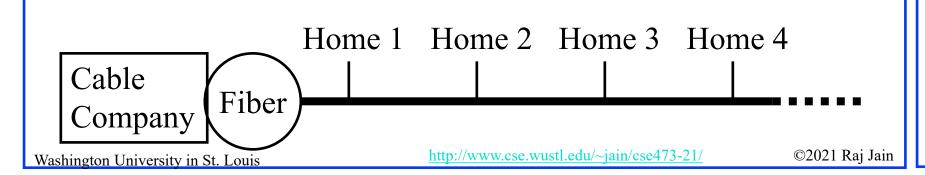

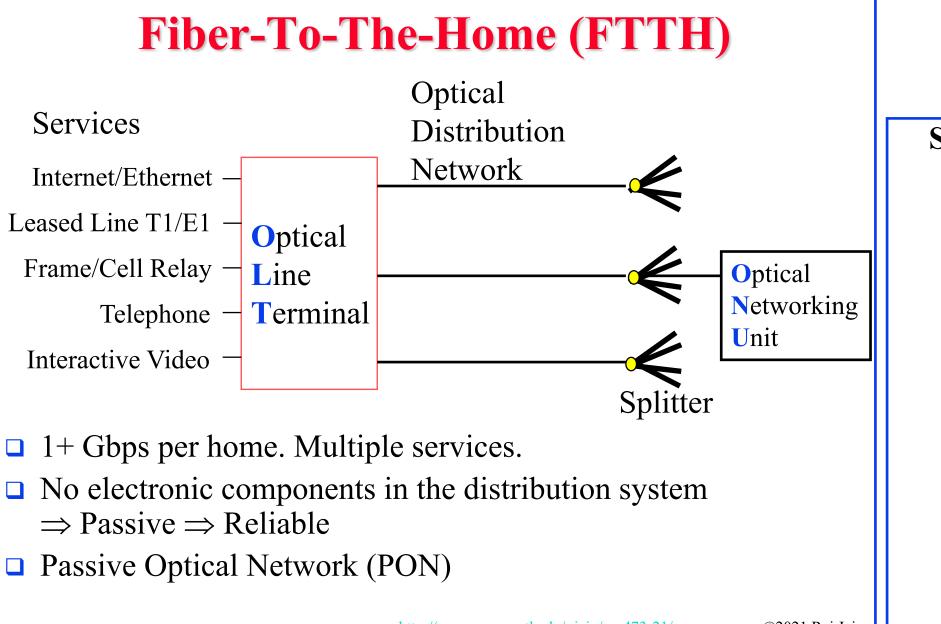

Cable

- Cable companies have a very-high speed medium (for video transmission)
- Phone wire = 4kHz for voice
 Video Cable = 500 MHz for video
 One TV Channel = 6 MHz
- □ 100 Mbps down/10 Mbps up
- □ Fiber in the main line + Coax in tributaries
 ⇒ Hybrid Fiber Coax (HFC)

Modem

Wireless Access Networks

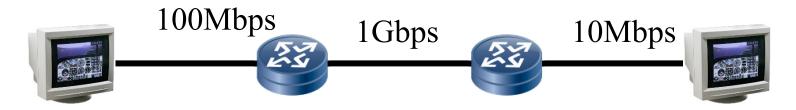

- □ Wi-Fi hot spots
- □ Cellular access: 2G/3G/4G (LTE)

Network Performance Measures

- Delay
- □ Throughput
- Loss Rate

Throughput

- Measured in Bits/Sec
- **Capacity:** Nominal Throughput
- **Throughput: Realistic**
- Bottleneck determines the end-to-end throughput

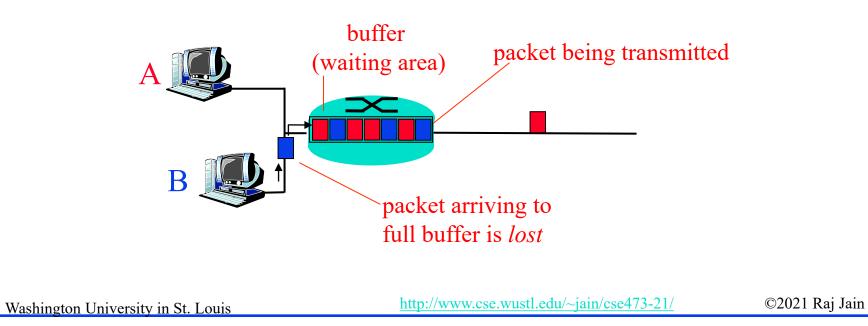

Net end-to-end capacity = 10 Mbps

Actual throughput will be less due to sharing and overhead.

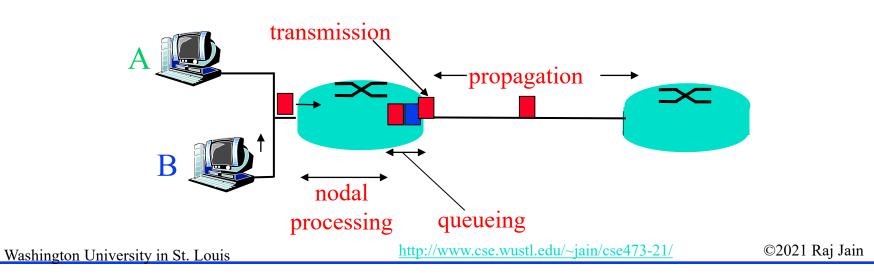

Loss Rate

- $\Box \quad Queuing \Rightarrow Buffer overflow$
- **Bit** Error Rate on the link
- Lost packets are retransmitted by the previous node or the source

Packet Switching Delay

- 1. **Processing Delay**: Check packets, decide where to send, etc.
- 2. Queuing Delay: Wait behind other packets
- 3. Transmission Delay: First-bit out to last-bit out on the wire = Packet Length/bit rate
- Propagation Delay: Time for a bit to travel from in to out = Distance/speed of signal
- **5.** Speed of Signal: 300 m/μs light in vacuum, 200 m/μs light in fiber, 250 m/μs electricity in copper cables

Packet Switching Delay: Example

- □ 1500 Byte packets on 10 Mbps Ethernet, 1km segment
- □ Transmission Delay = $1500 \times 8/10 \times 10^6 = 1200 \ \mu s = 1.2 \text{ms}$
- □ Propagation delay = $1000 \text{ m}/2.5 \times 10^8 = 4 \mu \text{s}$

Delay Example (CBR Circuits)

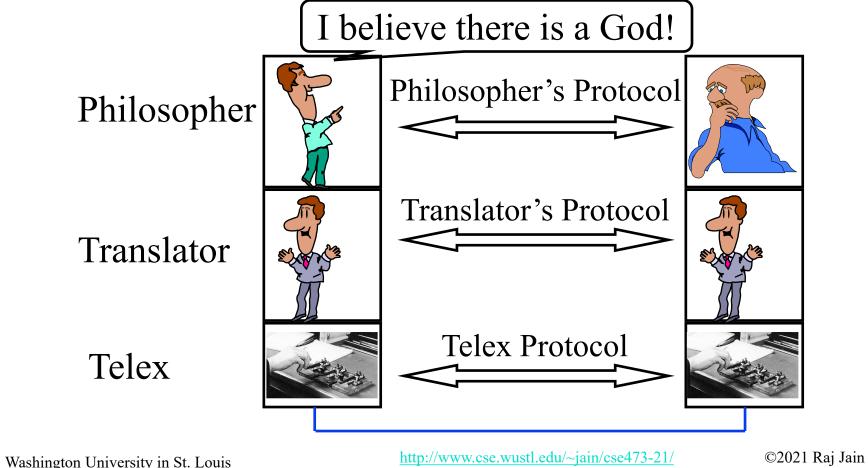

- How long would it take to send a file of 640,000 bits from host A to host B over a circuit-switched network?
 - > All links are 1.536 Mbps
 - > Each link is shared by 24 users
 - > 500 ms to establish end-to-end circuit
- $\Box Per User Rate = 1536/24 = 64 kbps$
- $\Box \text{ Time to transfer} = 640 \text{kb}/64 \text{kb} = 10 \text{ s}$
- **Total time =** .5 s + 10 s = 10.5 s

Homework 1B: Network Performance

- P5 [14 points]: Consider two hosts, A and B, connected by a single link of rate R bps. Suppose that the two hosts are separated by *m* meters, and suppose the propagation speed along the link is *s* meters/sec. Host A is to send a packet of size *L* bits to Host B.
- A. Express the propagation delay, d_{prop} in terms of *m* and *s*
- B. Determine the transmission time of the packet d_{trans} in terms of L and R.
- C. Ignoring processing queuing delays, obtain an expression for the end-to-end delay
- D. Suppose Host A begins to transmit the packet at time t=0. At time $t=d_{trans}$ where is the last bit of the packet?
- E. Suppose d_{prop} is greater than d_{trans} . At time $t=d_{trans}$, where is the first bit of the packet?
- F. Suppose d_{prop} is less than d_{trans} , at time $t=d_{trans}$, where is the first bit of the packet
- G. Suppose $s=2.5 \times 10^8$ m/s, L=280 bits, and R=56 kbps,. Find the distance *m* so that d_{prop} equals d_{trans} .

Protocol Layers

Problem: Philosophers in different countries speak different languages. The Telex system works only with English.

What is a Networking Protocol?

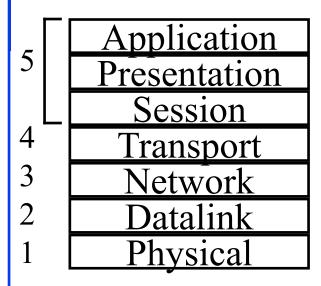

Network protocols define the format of messages, their meanings, sequence, and actions

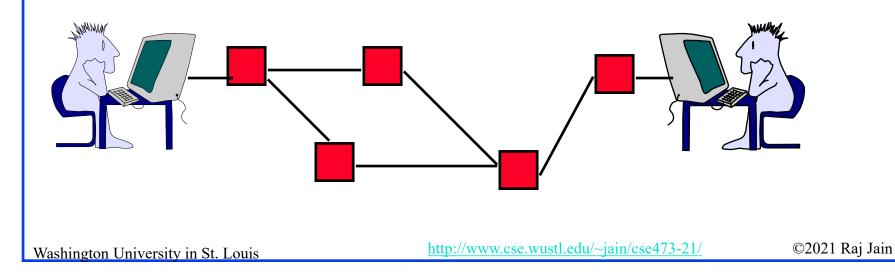

Student Questions

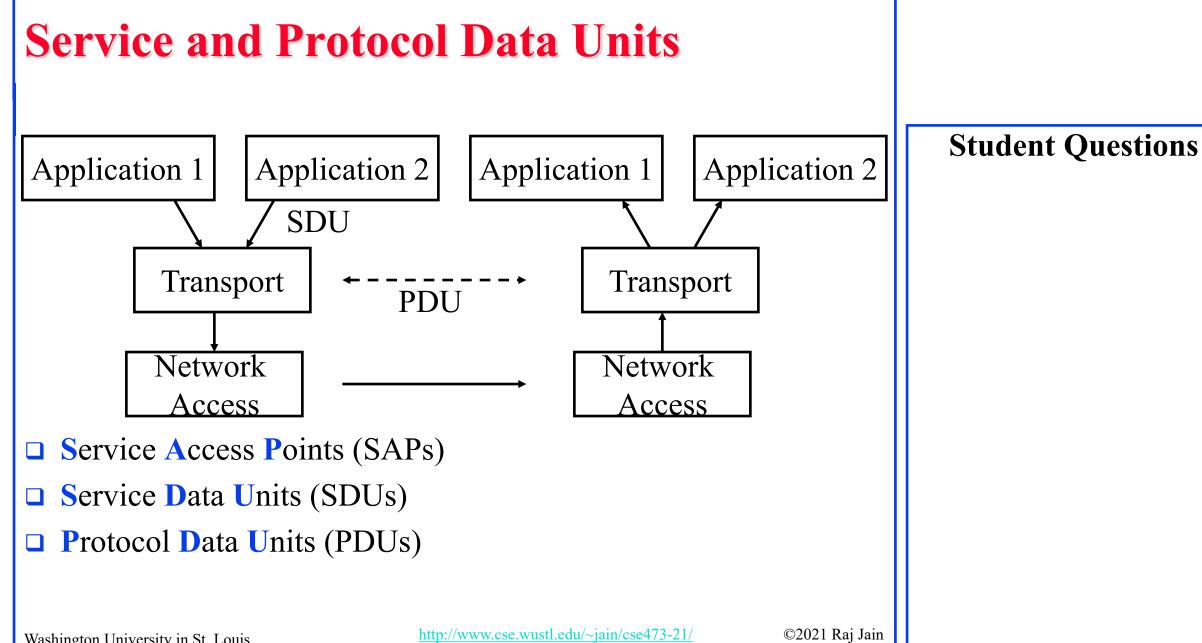

http://www.cse.wustl.edu/~jain/cse473-21/

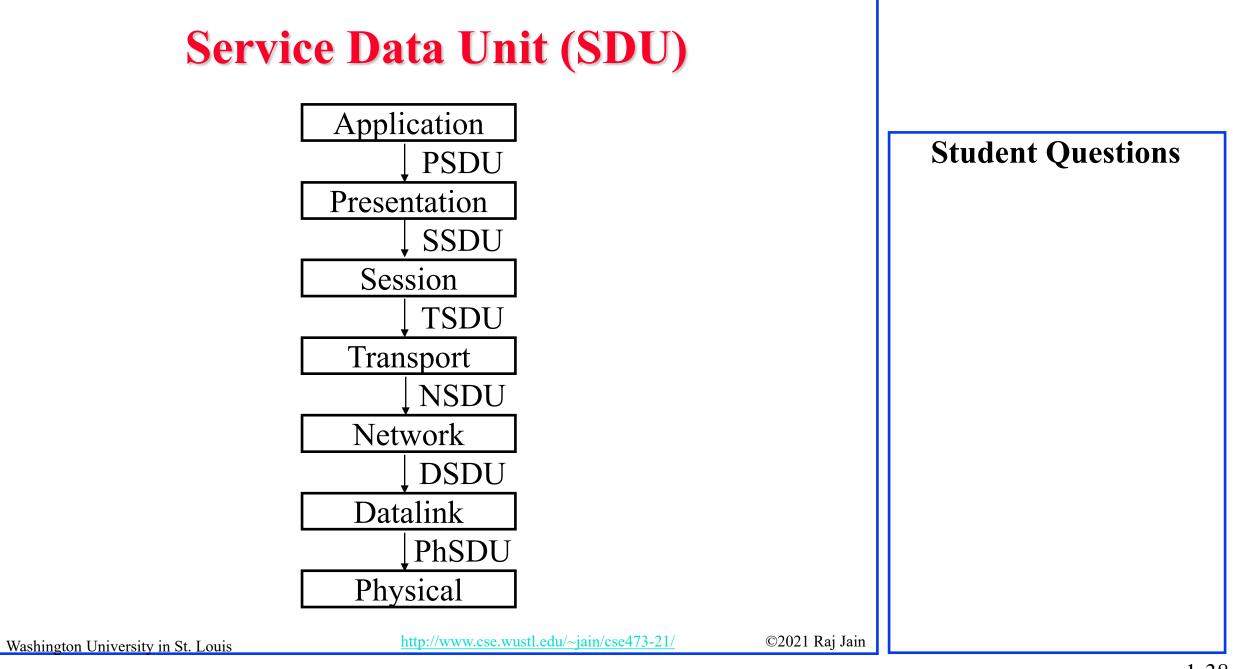

ISO/OSI Reference Model

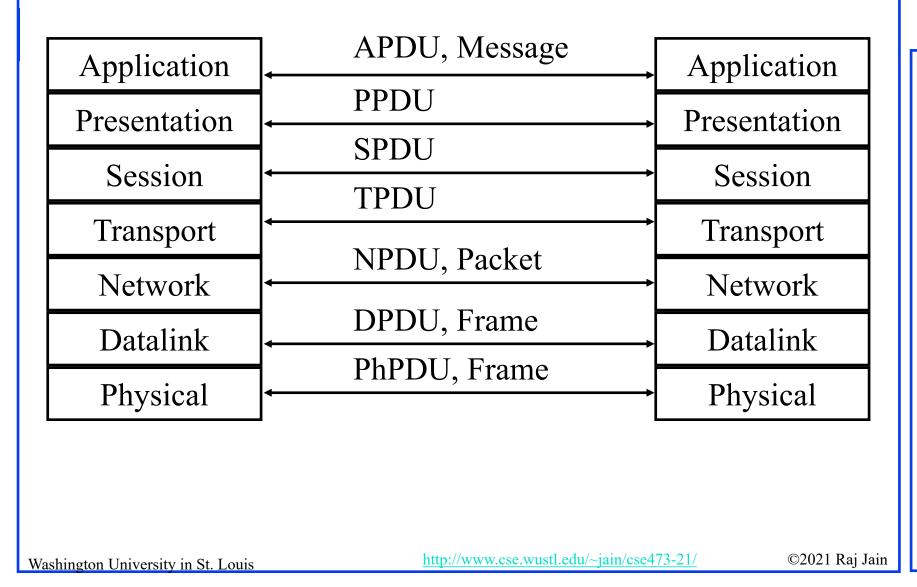

File transfer, Email, Remote Login ASCII Text, Sound Establish/manage connection End-to-end communication: TCP Routing, Addressing: IP Two party communication: Ethernet How to transmit signal: Coding

Protocol Data Unit (PDU)

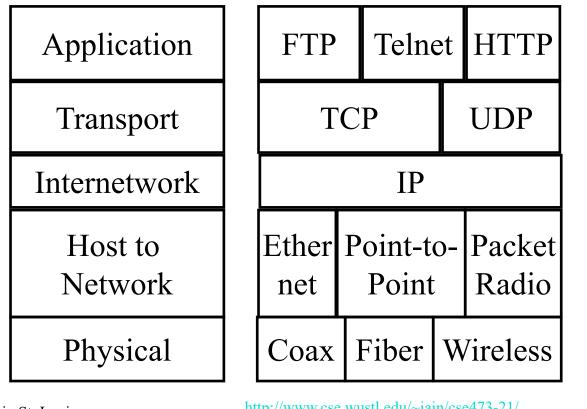

Student Questions

1-39

TCP/IP Reference Model

- **TCP** = Transmission Control Protocol
- IP = Internet Protocol (Routing)

P/IP Protocols

Student Questions

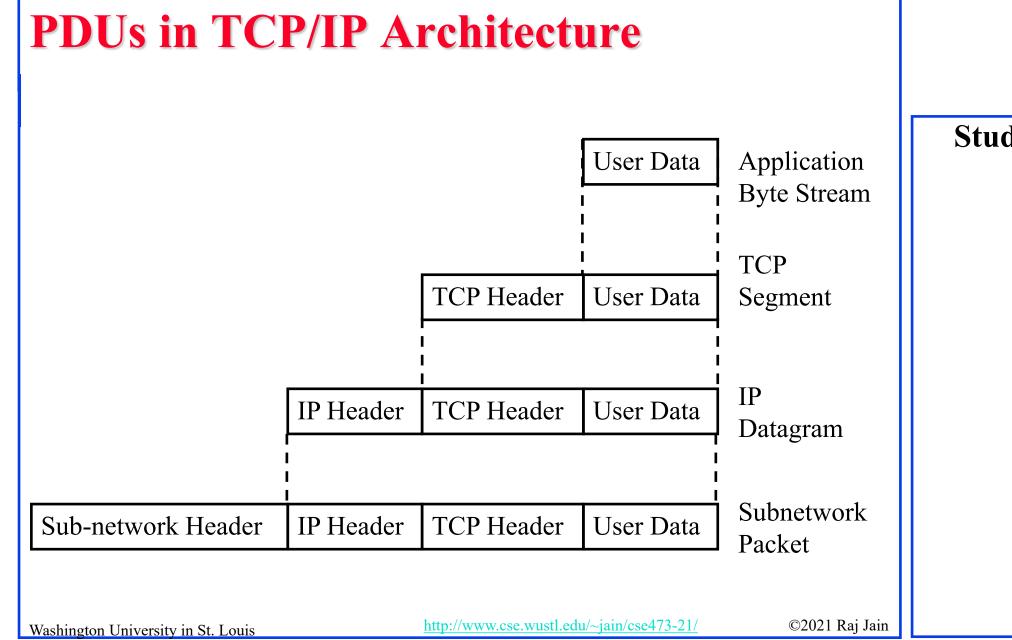

http://www.cse.wustl.edu/~jain/cse473-21/

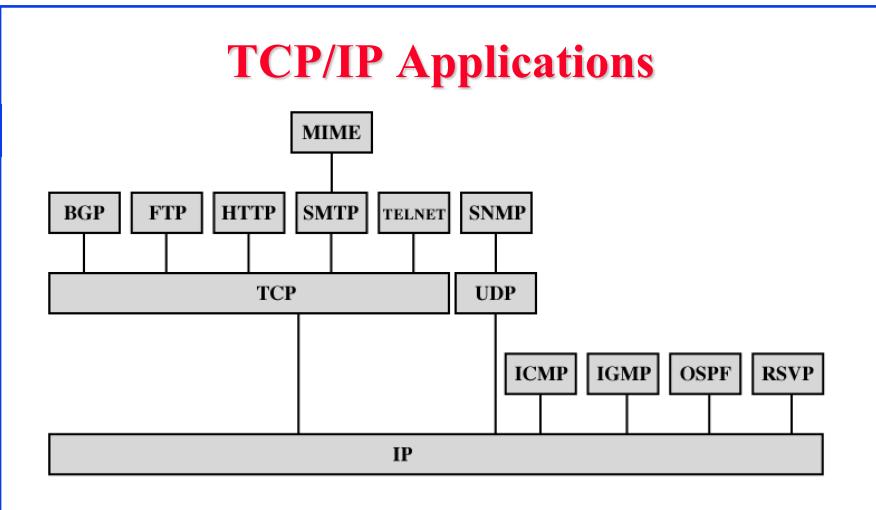

©2021 Raj Jain

	OSI vs	TCP/IP			
	OSI	TCP/IP			
	Application			Г	Student Questions
	Presentation	Application			
	Session				
	Transport	Transport (host-to-host)			
	Network	Internet			
	Data Link	Network Access			
	Physical	Physical			
Washington University in St. Louis	http:/	//www.cse.wustl.edu/~j	ain/cse473-21/	©2021 Raj Jain	

OSI vs TCP Reference Models

- OSI introduced concept of services, interface, protocols. These were force-fitted to TCP later
 ⇒ It is not easy to replace protocols in TCP.
- In OSI, reference model was done before protocols.
 In TCP, protocols were done before the model
- OSI: Standardize first, build later TCP: Build first, standardize later
- OSI took too long to standardize.
 TCP/IP was already in wide use by the time.
- □ OSI became too complex.
- □ TCP/IP is not general. Ad hoc.

Student Questions

- BGP = Border Gateway Protocol
- FTP = File Transfer Protocol
- HTTP = Hypertext Transfer Protocol
- ICMP = Internet Control Message Protocol
- IGMP = Internet Group Management Protocol
- IP = Internet Protocol
- MIME = Multi-Purpose Internet Mail Extension

Washington University in St. Louis

- OSPF = Open Shortest Path First RSVP = Resource ReSerVation Protocol
- SMTP = Simple Mail Transfer Protocol
- SNMP = Simple Network Management Protocol
- TCP = Transmission Control Protocol
- UDP = User Datagram Protocol

http://www.cse.wustl.edu/~jain/cse473-21/

Network Security

- Security Components
- □ Types of Malware
- Types of Attacks
- Buffer Overflows
- Distributed DoS Attacks

Security Components

- Confidentiality: Need access control, Cryptography, Existence of data
- Integrity: No change, content, source, prevention mechanisms, detection mechanisms
- □ Availability: Denial of service attacks,
- Confidentiality, Integrity and Availability (CIA)

Types of Malware

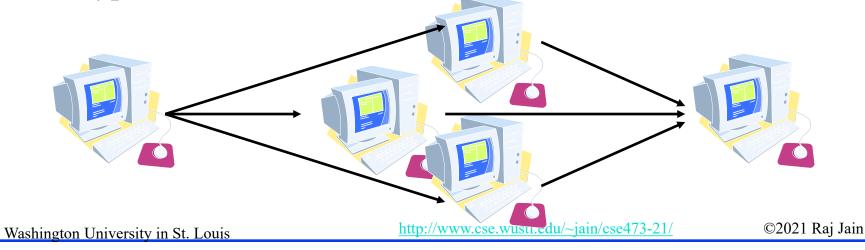

- □ Viruses: Code that *attaches* itself to programs, disks, or memory to propagate itself.
- □ Worms: Installs copies of itself on other machines on a network, e.g., by finding user names and passwords
- □ Trojan horses: Pretend to be a utility. Convince users to install on PC.
- **Spyware**: Collect personal information This is not a complete list.

Types of Attacks

- □ **Denial of Service (DoS):** Flooding with traffic/requests
- Buffer Overflows: Error in system programs. Allows hacker to insert his code in to a program.
- □ Malware
- **Brute Force**: Try all passwords.
- **Port Scanning:**
 - \Rightarrow Disable unnecessary services and close ports
- Network Mapping

Distributed DoS Attacks

- Tribe Flood Network (TFN) clients are installed on compromised hosts.
- All clients start a simultaneous DoS attack on a victim on a trigger from the attacker.
- □ **Trinoo** attack works similarly. Use UDP packets. Trinoo client report to Trinoo master when the system comes up.
- Stacheldraht uses handlers on compromised hosts to receive encrypted commands from the attacker.

History of Internet

- 1961: Kleinrock developed queueing theory. Showed effectiveness of packet-switching
- 1964: Baran's report on packet-switching in military nets
- 1967: ARPAnet conceived by Advanced Research Projects Agency
- 1969: First ARPAnet node operational First Request for Comment (RFC) www.ietf.org

THE ARPA NETWORK

History of Internet (Cont)

- □ Early 1990s: HTML, HTTP: Berners-Lee
- □ 1994: Mosaic, later Netscape

2007:

- $> \sim 500$ million hosts
- > Voice, Video over IP
- P2P applications: BitTorrent (file sharing) Skype (VoIP),
 PPLive (video)
- > Video applications: YouTube, gaming
- > Wireless, Mobility

Key Concepts

- □ Internet Protocol (IP): Protocol
- Address: All systems have an IP address, for example, 125.36.47.23
- □ Name: All systems have a human readable name, e.g., scorpio.cec.wustl.edu, ibm.com.
- Technically called DNS (domain name systems) name. Details will be introduced later.
- IETF: Internet Engineering Task Force. Make standards for Internet. IETF.org
- **RFC**: Request for comments. Documents that describe Internet protocols.

- 1. Most common medium is **UTP**, wireless, fiber
- 2. Internet is a network of networks
- 3. Enterprise, access, and core networks
- 4. Performance Measures: **Delay**, **Throughput**, **Loss** Rate
- 5. Protocol Layers: **ISO** and **TCP/IP** reference models

Ref: Read entire Chapter 1 and try R1-R28.

Lab 1: Internet and Wireshark

[6 points]

- 1. Find the IP address of your computer (ipconfig, ifconfig)
- 2. Find the IP address of <u>www.wustl.edu</u> (ping)
- 3. Measure delay from your computer to <u>www.wustl.edu</u> (ping or tracert)
- For all cases submit the screen snapshot showing the command used and the output. (Use Alt-Print-screen to capture a window to clipboard and then paste to word)

Lab 1 (Cont)

4. Download Wireshark,

https://www.wireshark.org/download.html

- Install it on your laptop.
- If you are using a windows computer, you will also need npcap (Packet Capture Tool) from nmap.org
- Start Wireshark and start logging
- > Tracert to <u>www.google.com</u>
- Stop logging. Capture the current screen and submit.
 Do not worry about the part of the trace that is no longer on the screen.
- > Q1: List 3 protocols that you see in the packet trace.
- Q2: What is the internet address of <u>www.google.com</u> from the trace?

Reading List

□ Read Chapter 2 of the textbook for the next class.
