1-2

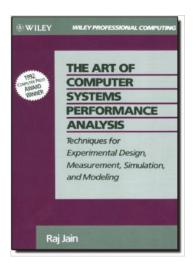

Goal of This Course

- □ Comprehensive course on analysis any system, algorithm, or component
- ☐ Includes measurement, statistical modeling, experimental design, simulation, and queuing theory
- How to avoid common mistakes in performance analysis
- ☐ Graduate course: (Advanced Topics)
 - ⇒ Lot of independent reading and writing
 - ⇒ Project/Survey paper (Research techniques)

1-3

Text Book

■ R. Jain, "Art of Computer Systems Performance Analysis," Wiley, 1991, ISBN:0471503363

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jain Wash

Objectives: What You Will Learn

- Specifying performance requirements
- □ Evaluating design alternatives
- Comparing two or more systems
- □ Determining the optimal value of a parameter (system tuning)
- ☐ Finding the performance bottleneck (bottleneck identification)
- □ Characterizing the load on the system (workload characterization)
- □ Determining the number and sizes of components (capacity planning)
- □ Predicting the performance at future loads (forecasting).

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

©2017 Rai Jair

1-5

Main Parts of the Course

- Part I: An Overview of Performance Evaluation
- □ Part II: Measurement Techniques and Tools
- □ Part III: Probability Theory and Statistics
- □ Part IV: Experimental Design and Analysis
- □ Part V: Simulation
- □ Part VI: Queueing Theory
- □ Part VII: Stochastic Processes

Basic Terms

- □ **System:** Any collection of hardware, software, and firmware
- **Metrics:** Criteria used to evaluate the performance of the system. components.
- Workloads: The requests made by the users of the system.

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

@2017 Pai Ia

1-6

Part I: An Overview of Performance Evaluation

- □ Introduction
- □ Common Mistakes and How To Avoid Them
- □ Selection of Techniques and Metrics

Washington University in St. Louis

p://www.cse.wustl.edu/~iain/cse567-17/k 01int.htm

©2017 Raj Jain

Washington University in St. Louis

ttp://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Ja

1-7

Example I

- □ What performance metrics should be used to compare the performance of the following systems:
 - > Two disk drives?
 - > Two transaction-processing systems?
 - > Two packet-retransmission algorithms?

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

1-9

Example II

- □ Which type of monitor (software or hardware) would be more suitable for measuring each of the following quantities:
 - > Number of Instructions executed by a processor?
 - > Degree of multiprogramming on a timesharing system?
 - > Response time of packets on a network?

Part II: Measurement Techniques and Tools

- □ Types of Workloads
- Popular Benchmarks
- ☐ The Art of Workload Selection
- Workload Characterization Techniques
- Monitors
- Accounting Logs
- Monitoring Distributed Systems
- Load Drivers
- Capacity Planning
- ☐ The Art of Data Presentation
- Ratio Games

Washington University in St. Louis

w.cse.wustl.edu/~jain/cse567-17/k 01int.htm

1-10

Part III: Probability Theory and Statistics

- □ Probability and Statistics Concepts
- □ Four Important Distributions
- Summarizing Measured Data By a Single Number
- Summarizing The Variability Of Measured Data
- ☐ Graphical Methods to Determine Distributions of Measured Data
- Sample Statistics
- Confidence Interval
- □ Comparing Two Alternatives
- Measures of Relationship
- □ Simple Linear Regression Models
- Multiple Linear Regression Models
- Other Regression Models

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

Example III

☐ The number of packets lost on two links was measured for four file sizes as shown below:

File Size	Link A	Link B
1000	5	10
1200	7	3
1300	3	0
50	0	1

Which link is better?

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

©2017 Rai Jai

1-13

One Factor ExperimentsTwo Factors Full Factorial Design without Replications

□ 2^{k-p} Fractional Factorial Designs

□ 2^k Factorial Designs

□ Introduction to Experimental Design

□ 2^kr Factorial Designs with Replications

□ Two Factors Full Factorial Design with Replications

Part IV: Experimental Design

and Analysis

☐ General Full Factorial Designs With *k* Factors

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

©2017 Rai Jair

1-14

Example IV

- ☐ The performance of a system depends on the following three factors:
 - > Garbage collection technique used: G1, G2, or none.
 - > Type of workload: editing, computing, or AI.
 - > Type of CPU: C1, C2, or C3.

How many experiments are needed? How does one estimate the performance impact of each factor?

Part V: Simulation

- □ Introduction to Simulation
- □ Types of Simulations
- Model Verification and Validation
- □ Analysis of Simulation Results
- □ Random-Number Generation
- □ Testing Random-Number Generators
- □ Random-Variate Generation
- □ Commonly Used Distributions

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jain

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jai

1-15

Example V

- ☐ In order to compare the performance of two cache replacement algorithms:
 - > What type of simulation model should be used?
 - > How long should the simulation be run?
 - > What can be done to get the same accuracy with a shorter run?
 - > How can one decide if the random-number generator in the simulation is a good generator?

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jair

1-17

Example VI

☐ The average response time of a database system is three seconds. During a one-minute observation interval, the idle time on the system was ten seconds.

Using a queueing model for the system, determine the following:

- > System utilization
- > Average service time per query
- > Number of queries completed during the observation interval
- > Average number of jobs in the system
- Probability of number of jobs in the system being greater than 10
- > 90-percentile response time
- > 90-percentile waiting time

@2017 Pai Jain

Part VI: Queueing Theory

- ☐ Introduction to Queueing Theory
- ☐ Analysis of A Single Queue
- Queueing Networks
- Operational Laws
- ☐ Mean Value Analysis and Related Techniques
- □ Convolution Algorithm
- □ Advanced Techniques

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

@2017 Pai Ia

1-18

Part VII: Stochastic Processes

- What are different types of time series models?
- How do you fit a model to a series?
- How do you model a series that has a periodic or seasonal behavior as is common in video streaming?
- What are heavy-tailed distributions and why they are important?
- □ How to check if a sample of observations has a heavy tail?
- What are self-similar processes?
- □ What are short-range and long-range dependent processes?
- Why does long-range dependence invalidate many conclusions based on previous statistical methods?
- How do you check if a sample has a long-range dependence?

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Ja

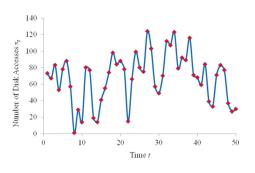

•

1-19

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

Example VII

■ What is the right model for the following measurements on # of disk accesses

Washington University in St. Louis http://www.cse.wustl.edu/~jain/cse567

1-21

The Art of Performance Evaluation

☐ Given the same data, two analysts may interpret them differently.

Example:

☐ The throughputs of two systems A and B in transactions per second is as follows:

System	Workload 1	Workload 2
A	20	10
В	10	20

Washington University in St. Louis

ttp://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

3017 Pai 1

1-22

Possible Solutions

□ Compare the average:

System	Workload 1	Workload 2	Average
A	20	10	15
В	10	20	15

Conclusion: The two systems are equally good.

□ Compare the ratio with system B as the base

System	Workload 1	Workload 2	Average
A	2	0.5	1.25
В	1	1	1

Conclusion: System A is better than B.

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

©2017 Raj Jain

Solutions (Cont)

□ Compare the ratio with system A as the base

System	Workload 1	Workload 2	Average
Α	1	1	1
В	0.5	2	1.25

Conclusion: System B is better than A.

- □ Similar games in: Selection of workload, Measuring the systems, Presenting the results.
- □ Common mistakes will also be discussed.

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Ja

Grading

□ Exams (Best of 2 mid terms + Final) 60%

□ Class participation 5%

■ Homeworks 15%

□ Project 20%

Washington University in St. Louis

 $\underline{http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm}$

©2017 Rai Jain

1-25

Prerequisites

- □ CSE 131: Computer Science I
- □ CSE 126: Introduction To Computer Programming
- □ CSE 260M: Introduction To Digital Logic And Computer Design (Not required)
- □ Basic Probability and Statistics
- ☐ Matrix multiplication and inversion

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

∂2017 Da; I

1-26

Prerequisite

- □ Statistics:
 - > Mean, variance
 - > Normal distribution
 - > Density function, Distribution function
 - Coefficient of variation
 Correlation coefficient
 - > Median, mode, Quantile
- Programming

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

©2017 Raj Jain

Tentative Schedule

2017 Raj J

Projects

- □ A survey paper on a performance topic
 - Workloads/Metrics/Analysis: Databases, Networks, Computer Systems, Web Servers, Graphics, Sensors, Distributed Systems
 - > Comparison of Measurement, Modeling, Simulation, Analysis Tools: NS2
 - > Comprehensive Survey: Technical Papers, Industry Standards, Products
- ☐ A real case study on performance of a system you are already working on
- □ Average 6 Hrs/week/person on project + 9 Hrs/week/person on class
- \square Recent Developments: Last 2 to 4 years \Rightarrow Not in books
- Better ones may be submitted to magazines or journals

1-31

Example of Previous Case Studies

- □ Performance of Google App Engine and Amazon Web Service
- □ Availability and Sensitivity of Smart Grid Components
- Modeling and Analysis Issues in x86-based Hypervisors
- ☐ Image Sensor Performance
- □ Performance of Solving Laplace's Equation using Auto-Pipe
- Performance Modeling of Multi-core Processors
- □ Performance of Named Data Networking
- □ A Measurement Study of Packet Reception using Linux
- □ Performance Analysis of Robotics Systems
- Performance and Measurement Issues of Smart Phones Design
- ☐ Analysis of Online Social Networks
- ☐ Measurement Study on the BitTorrent File Distribution System
- □ A Survey of Wireless Sensor Network Simulation Tools

Washington University in St. Louis

1-33

Office Hours

- □ Tuesday/Thursday:11 AM to 12 noon
- □ Office: Jolley 208
- □ Teaching Assistant:
 - > Maede Zolanvari, maede.zolanvari@wustl.edu
 - > Office Hours: Monday/Friday 1-2PM
 - > Jolley 323

Project Schedule

Tue 10/03 Topic Selection

Tue 10/10 References Due

Tue 10/17 Outline Due

Tue 11/07 First Draft Due → Peer reviewed

Tue 11/14 Reviews Returned

Tue 11/21 Final Report Due

Washington University in St. Louis

tp://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

@2017 Pai I

1-34

Exams

- Exams consist of numerical, fill-in-the-blank and multiple-choice (true-false) questions.
- □ There is negative grading on incorrect multiple-choice questions. Grade: +1 for correct. -1/(n-1) for incorrect.
 ⇒ For True-False: +1 for Correct, -1 for Incorrect This ensures that random marking will produce an average of 0.
- Everyone including the graduating students are graded the same way.
- □ Highest score achieved becomes 100% for that exam.

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jain

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jair

1-35

Exams (Cont)

- □ All exams are closed book. One 8.5"X11" cheat sheet with your notes on both sides is allowed.
- No smart phones allowed. Only simple TI-30 or equivalent calculator allowed for calculations.
- Exam dates are fixed and there are no substitute exams
 ⇒ Plan your travel accordingly.
- Best of the two mid-terms is used.

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Rai Jair

1-37

Homework Grading

- □ Grading basis: Method + Correct answer
- □ Show how you got your answer
 - > Show intermediate calculations.
 - > Show equations or formulas used.
 - If you use a spreadsheet, a statistical package, or write a program, print it out and turn it in with the homework.
 - > For Excel, set the print area and scale the page accordingly to fit to a page. (See Page Setup)

Homework Submission

- □ All homeworks are due on the following Tuesday at the beginning of the class unless specified otherwise.
- □ Any late submissions, if allowed, will *always* have a penalty.
- □ All homeworks should be submitted in hardcopy
- □ All homeworks are identified by the class handout number.
- ☐ All homeworks should be on a separate sheet. Your name should be on every page.
- □ Please write CSE567 in the subject field of all emails related to this course.
- □ Use word "Homework" in the subject field on emails related homework. Also indicate the homework number.
- ☐ The first page of all homeworks submitted should be blank with only your name on the top-right corner

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k_01int.htm

©2017 Rai Jair

1-38

Quizzes

□ There may be a short 5-minute quiz at the beginning of each class to check if you have read the topics covered in the last class.

Washington University in St. Louis http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jain

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Raj Jai

1-39

Academic Integrity

- Academic integrity is expected in homeworks
- □ All solutions submitted are expected to be yours and not copied from others or from solution manuals or from Internet
- □ All integrity violations will be reported to the department and action taken

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

©2017 Rai Jair

1-41

Class Discussions

- □ We will use Piazza for class discussion.
- ☐ Find our class page at:

https://piazza.com/wustl/fall2017/cse567m/home

☐ You can sign up at:

https://piazza.com/wustl/fall2017/cse567m

Washington University in St. Louis

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

1-42

Summary

□ Goal: To prepare you for correct analysis and modeling of any system

- ☐ There will be a self-reading and writing
- ☐ Get ready to work hard

http://www.cse.wustl.edu/~jain/cse567-17/k 01int.htm

Quiz 0: Prerequisites

True or False?

ΤF

	(0.1) variates is 1	

- \square The sum of two normal variates with means 4 and 3 has a mean of 7.
- \square The probability of a fair coin coming up head once and tail once in two throws is 1.
- \square The density function f(x) approaches 1 as x approaches ∞ .
- \square Given two variables, the variable with higher median also has a higher mean.
- \square The probability of a fair coin coming up heads twice in a row is 1/4.
- \square The difference of two normal variates with means 4 and 3 has a mean of 4/3.
- \square The cumulative distribution function F(x) approaches 1 as x approaches ∞ .
- ☐ ☐ High coefficient of variation implies a high variance and vice versa.
- $\square \square$ If x is 0, then after x++, x will be 1.
