

Introduction to Internet of Things

Raj Jain
Washington University in Saint Louis
Saint Louis, MO 63130
Jain@cse.wustl.edu

These slides and audio/video recordings of this class lecture are at:
<http://www.cse.wustl.edu/~jain/cse570-15/>

1. What are “Things” and why IoT is important
2. Recent Protocols for IoT
3. IEEE 1901 - Power Line Communication (PLC)
4. IEEE 1905.1 - Convergent Digital Home Network

Note: This is part 1 of a series of class lectures on IoT.

MQTT, 6LowPAN, and RPL are covered in other parts.

Internet of Things

- ❑ Less than 1% of things around us is connected.
Refrigerator, car, washing machine, heater, a/c, garage door, should all be connected but are not.
- ❑ From 10 Billion today to 50 Billion in 2020
Should include processes, data, things, and people.
- ❑ \$14 Trillion over 10 years
⇒ Third in the list of top 10 strategic technologies by Gartner
(After Mobile devices, Mobile Apps, but before Clouds, ...)
- ❑ a.k.a. **Internet of Everything** by Cisco
Smarter Planet by IBM

Ref: "Gartner Identifies Top 10 Strategic Technologies,"

<http://www.cioinsight.com/it-news-trends/gartner-identifies-top-10-strategic-technologies.html>

Sample IoT Applications

Smart Grid

Smart Health

Smart Home

Smart Cities

Smart Industries

Smart TV

Smart Watch

Smart Car

Smart Kegs

What's Smart?

- ❑ IoT = Instrument, Interconnect, Intelligently process (3 I's)
- ❑ Old: Smart = Can think \Rightarrow Can compute
- ❑ Now: Smart = Can find quickly, Can Delegate
 \Rightarrow Communicate = Networking
- ❑ Smart Grid, Smart Meters, Smart Cars, Smart homes, Smart Cities, Smart Factories, Smart Smoke Detectors, ...

Think

Communicate

Why IoT Now?

- IoT = Sensing + Communication + Computation
- 1. Micro-Sensors: Temperature, Moisture, Pressure, air quality, ...
- 2. Tags: Radio Frequency Id (RFID), Quick Response (QR) Codes, ...
- 3. Energy Efficient Communication: Small or no batteries, Personal area communication (PAN), Bluetooth, ZigBee, ...
- 4. Micro-Computing: Micro multi-core chips, Raspberry Pi, Intel Galileo, Arduino, ...
- 5. Cloud Computing: Little or no local computing
- 6. Open/Small operating systems: Linux

Funding

Google Trends

- ❑ Around for 10 years
- ❑ IERC-European Research Cluster on the Internet of Things funded under 7th Framework in 2009
⇒ “Internet of European Things”
- ❑ US interest started in 2009 w \$4B funding for **smart grid** in American Recovery and Reinvestment Act of 2009

Research Funding for IoT

- ❑ 70 M € in European Research program FP7
⇒ Internet of European Things
- ❑ Networking and Information Technology Research and Development (NITRD)
 - Group of 15 Federal agencies: NSF, NIH, NASA, DOE, DARPA, ONR, ...
 - Recommends supplement to the president's annual budget
 - CPS is one of the areas recommended by NITRD starting 2012 ⇒ Smart infrastructure
 - ❑ Smart Grid, Smart Bridges, Smart Cars, tele-operational surgical robots, Smart **Buildings**
- ❑ March 2014: £45M for IoT research in UK by David Cameron

Ref: NITRD, <http://www.nitrd.gov/>

Washington University in St. Louis

<http://www.cse.wustl.edu/~jain/cse570-15/>

©2015 Raj Jain

Smart Grid

- ❑ \$4B funding in Economic Recovery Act
- ❑ Smart Grid can
 - Identify surges, outages, and failure points
 - Contain damage and reroute power around failure
 - Accommodate new off-grid energy sources
 - Load balance dynamically
 - Be less vulnerable to accidental or malicious harms
- ❑ Meters that provide features needed for energy control
- ❑ Efficient cryptographic communication between substations and control centers
- ❑ Protocols for publishing/subscribing of system data

Ref: Workshop on Future Directions in CPS Security, July 2009, http://www.ee.washington.edu/faculty/radha/dhs_cps.pdf

Washington University in St. Louis

Business Opportunities

- ❑ Components: Sensors, wireless radios, protocols,
- ❑ Smart Objects: Smart TV, Camera, Watch, ...
- ❑ Systems: Buildings, Cars, Health, ...
- ❑ Network service providers: ISP
- ❑ Application Service Providers: Monitoring, Analytics, Apps, ...

Venture Activities in IoT

- ❑ \$1.1B invested in IoT startups by VCs in 153 deals in 2013
 - Quantified Self: Know your body and mind
 - Healthcare sensors: Wearable clock, sleep monitors
 - Energy management
 - Home Automation: Kitchenware, locks,
 - Environmental monitoring: Air Quality sensors, personal weather stations
- ❑ January 2014: Google buys NEST for 3.3B
- ❑ May 2014: \$150M in VC investments in IoT by Cisco

Ref: <http://www.cbinsights.com/blog/internet-of-things-investing-snapshot/>
<http://www.zdnet.com/cisco-invests-150m-in-internet-of-things-startups-7000028964/>
<http://www.cse.wustl.edu/~jain/cse570-15/>

Recent IoT Products

NEST Thermostat

Corventis: Wireless Cardiac Monitor

WEMO Remote

Tractive Pet Tracker

Ninja Blocks

Revolve Home Automation

ThingWorx Application Platform

Lings Cloud Platform

Mbed Development Platform

Xively Remote Access API

Intel Quark Processor

AllJoyn S/W Framework

IoT Research Challenges

1. **Naming and Addressing:** Advertising, Searching and Discovery
2. **Service Orchestration**
3. **Power/Energy/Efficient resource management.**
Energy harvesting
4. **Things to Cloud:** Computation and Communication Gateways
5. **Miniaturization:** Sensors, CPU, network
6. **Big Data Analytics:** 35 ZB of data \$2B in value by 2020
7. **Semantic technologies:** Information and data models for interoperability
8. **Virtualization:** Multiple sensors aggregated, or a sensor shared by multiple users
9. **Privacy/Security/Trust/Identity/Anonymity**
Target Pregnancy Prediction
10. **Heterogeneity/Dynamics/Scale**

Internet of Harmful Things

Imagine, as researchers did recently at Black Hat, someone hacking your connected toilet, making it flush incessantly and closing the lid repeatedly and unexpectedly.

News

Worm may create an Internet of Harmful Things, says Symantec (Take note, Amazon)

Security firm Symantec says it has found a Linux worm aimed at Internet of Things devices

By Patrick Thibodeau

December 3, 2013 01:22 PM ET [Add a comment](#)

Computerworld - Security researchers are gradually raising warnings that the Internet of Things will increase, by multitudes, the number of things that can be hacked and attacked.

The Hitchcockian plotlines are endless. Replace [The Birds](#) with flying [Amazon delivery drones](#). Or imagine, as researchers did recently at Black Hat, someone hacking your [connected toilet](#), making it flush incessantly and closing the lid repeatedly and unexpectedly.

Privacy Issue: Beacons

- ❑ Advertizing based on proximity
- ❑ Peripherals (your phone) broadcasts its presence if Bluetooth is turned on
- ❑ Primary aim of these broadcasts is to allow device discovery
- ❑ Advertising packets consist of a header and max 27B of payload with multiple TLV-encoded data items
 - May include signal strength \Rightarrow Distance
- ❑ iOS7 iPhones can send/received iBeacons
- ❑ Can be used for customized advertising, indoor location, geofencing
- ❑ PayPal uses this to identify you.
You can pay using a PIN and your phone.

Power per MB

| Type | Bit rate | TX Power | mJoules/MB |
|-----------------------|----------|----------|------------|
| 802.11b | 11Mb | 50mW | 36.4 |
| 802.11g | 54Mb | 50mW | 7.4 |
| 802.11a | 54Mb | 200mW | 29.6 |
| 802.15.1 Bluetooth | 1Mb | 1mW | 8.0 |
| 802.15.3 | 55Mb | 200uW | 0.03 |

- Once connected, Bluetooth classic maintains connections even when there is no data. Low power but not low enough.

Datalink Issues

- ❑ Energy efficiency
 - \Rightarrow Need to decrease energy/bit by a factor of 1000
 - Energy/bit has gone down by a factor of 2 per year
 - Either wait ten years or design better protocols
- ❑ Small messages \Rightarrow Need low overhead
- ❑ Limited computing \Rightarrow Light weight protocols
 - \Rightarrow lightweight Encryption, authentication, security
- ❑ Quality of Information (QoI)

Networking Issues

- ❑ Large number \Rightarrow 32-bit or 48-bit addressing not sufficient
- ❑ 32-bit IPv4 addresses too small
- ❑ 48-bit IEEE 802 too small
- ❑ 128-bit IPv6 addresses too large. Tiny things do not have energy to transmit such large addresses.
- ❑ 16-bit local addresses and 64-bit global addresses
- ❑ 6LowPAN, 6-to-NonIP

Last 100m Protocols

- ❑ The Last Mile: Mobile and Broadband Access revolution
Smart Grid, Smart Cities, Smart Industries
- ❑ The last 100m: Smart home
- ❑ The last meter: Smart Healthcare, Smart Wearable's

Legacy IoT Protocols

- ❑ **BACnet**: Building Automation and Control Network
- ❑ **LonWorks**: Local Operating Network (like BACnet)
- ❑ **ModBus**: Modicon (Schneider Electric)'s Serial Bus
- ❑ **KNX**: Home and Building Automation Standard
- ❑ **Z-Wave**: Wireless Communication for Home Automation
- ❑ **M-Bus**: Bus for remote reading of gas and electric meters
- ❑ **ANSI CI12.20**: Electric Meter Accuracy and Performance
- ❑ **DLMS**: Device Language Message Specification
- ❑ **COSEM**: Company Specification for Energy Metering

Recent Protocols for IoT

Ref: <http://tools.ietf.org/html/draft-rizzo-6lo-6legacy-00>, <http://en.wikipedia.org/wiki/OAuth>, <http://en.wikipedia.org/wiki/ANT%2B>
http://en.wikipedia.org/wiki/Near_field_communication, http://en.wikipedia.org/wiki/Weightless_%28wireless_communications%29

Standardization

- ❑ Almost every standards body is working on IoT:
 - IEEE: 802.11, 802.15.4, HomePlug
 - ZigBee Alliance: ZigBee Smart
 - Bluetooth SIG: Bluetooth Smart
 - IETF: RPL, 6LowPAN
 - ITU:
 - ETSI: DECT/ULE
 - IPSO, ...
- ❑ Seven organizations joined together to avoid duplication:
ARIB, ATIS, CCSA, ETSI, TTA, TTC ⇒ oneM2M

Fog Computing

Ref: <http://community.spiceworks.com/topic/254392-fog-computing-replaces-cloud-as-new-tech-buzzword>

Washington University in St. Louis

<http://www.cse.wustl.edu/~jain/cse570-15/>

©2015 Raj Jain

Fog Computing (Cont)

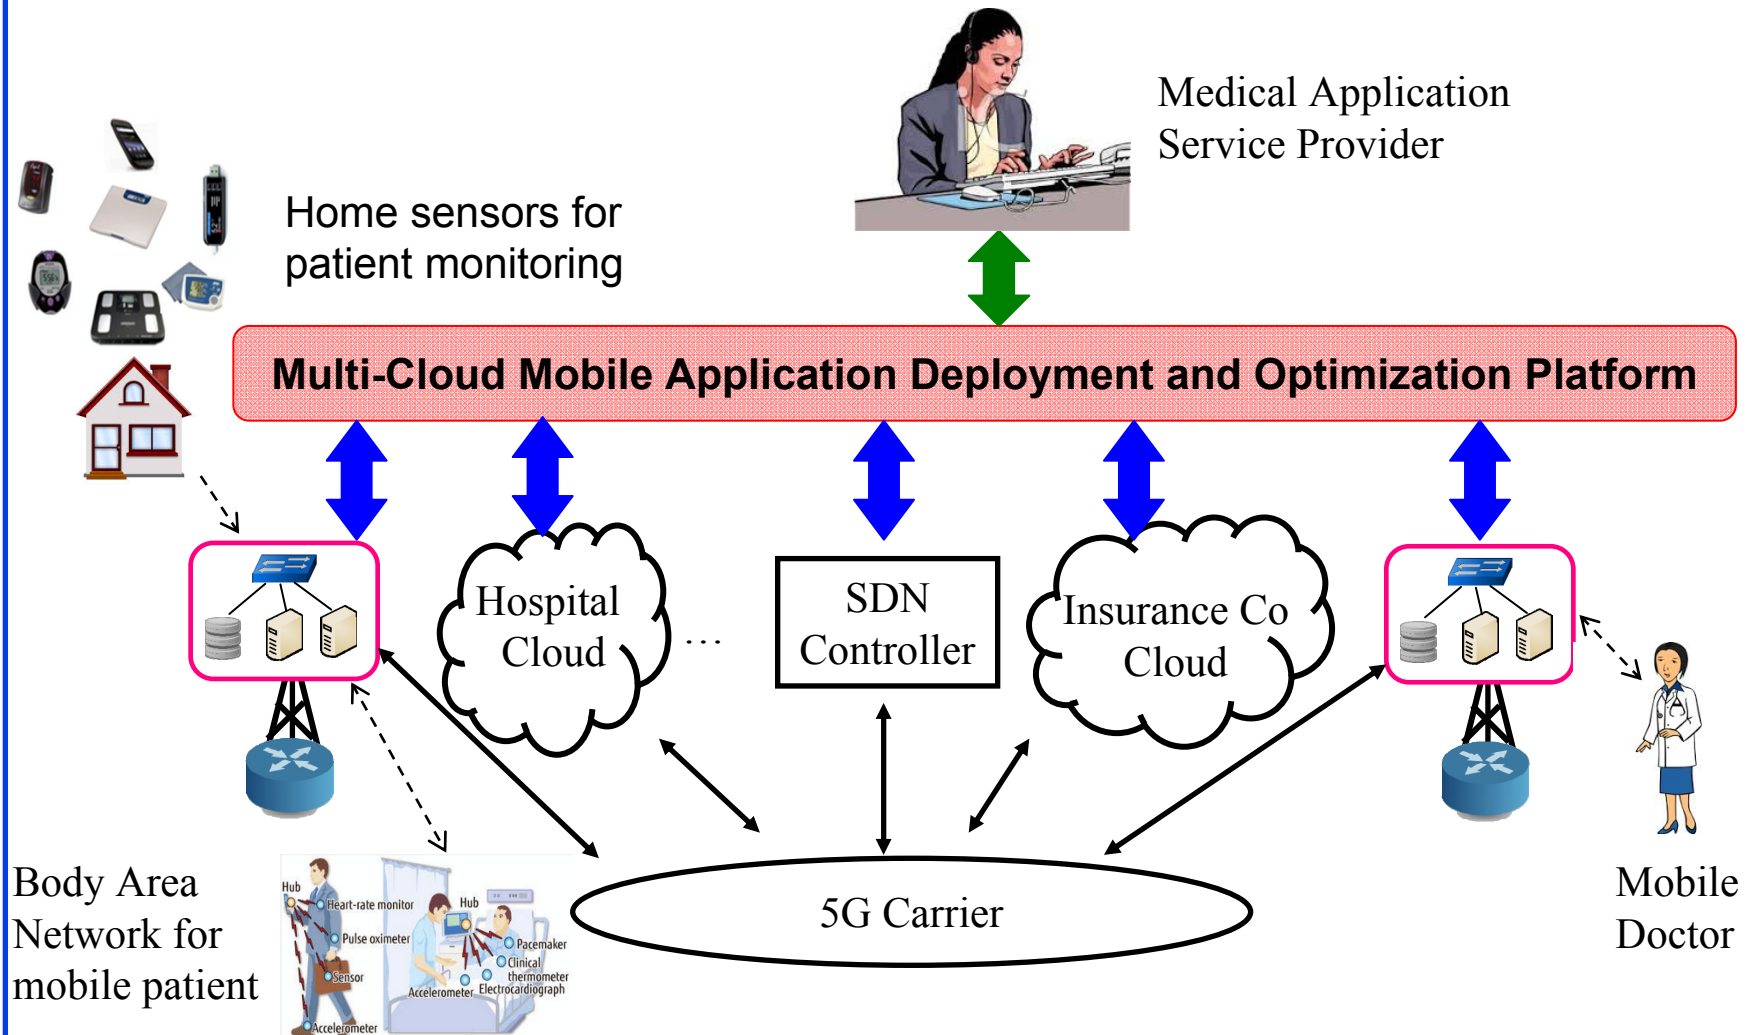

- ❑ Location Aware and Location Sensitive
 - ⇒ Low latency ⇒ Computing in micro clouds
 - ⇒ Computing in the edge ⇒ Computing everywhere
 - ⇒ Fog
- ❑ Geographically distributed => Everywhere/Anywhere
- ❑ Large Scale
- ❑ Mobility
- ❑ Real-Time

Trend: Micro-Clouds on Towers

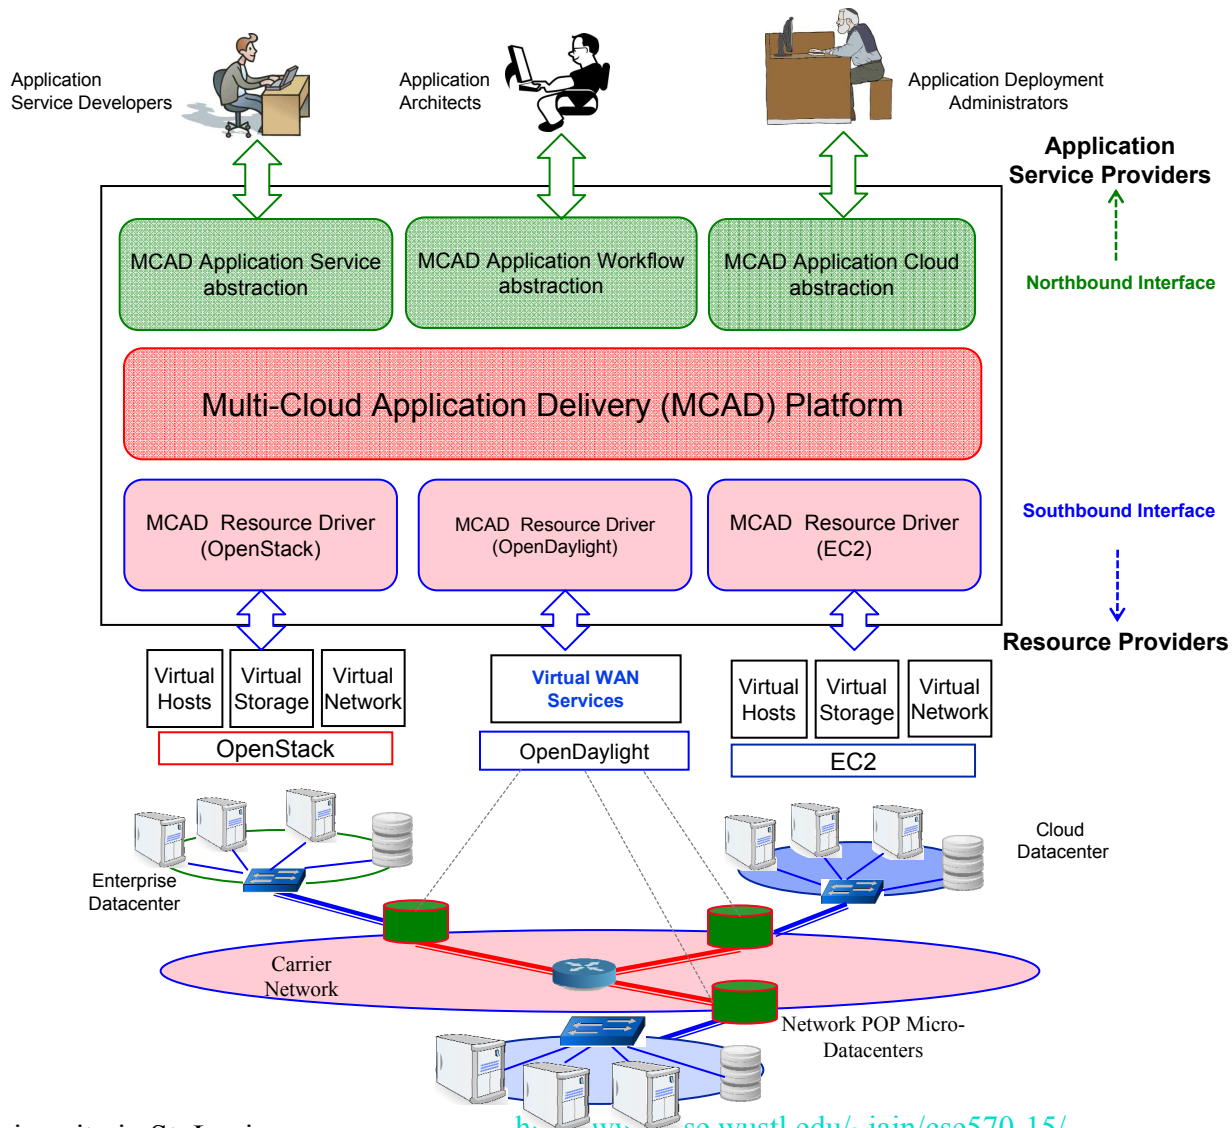

New Business Opportunities: Datacenters on Towers, Internet of Things

Mobile Healthcare Use Case

Multi-Cloud Management

Summary

1. Less than 1% of things are connected
⇒ IoT is a big opportunity for academics and industry
2. Smart Grid and Energy management is leading the change.
3. Smartness comes from communication capability since the computation can be delegated
4. Right at the knee: Academic and Startup Research opportunities in almost subfields of computing including hardware development, data analytics, security, and networking.
5. Cloud computing everywhere leads to fog computing and multi-cloud computing ⇒ AppFabric
