Architectures for the Future Networks and the Next Generation Internet

Washington University in Saint Louis
Saint Louis, MO 63130
Jain@cse.wustl.edu
http://www.cse.wustl.edu/~jain/

Tutorial at MILCOM 2010, November 2, 2010

Overview

1. Why Next Gen?
2. Internet 3.0
3. Content Centric Networks
4. Challenged Networks
5. Routing Architectures: Open Flow, ID-Locator Split Proposals
6. Green Networking
7. Next Generation Testbeds

Future Internet Projects

- In 2005 US National Science Foundation started a large research and infrastructure program on next generation Internet
- Q: How would you design Internet today? Clean slate design.
- "Future Internet Design" (FIND): 48+ projects
    - Stanford, MIT, Berkeley, CMU, …
    - "An Architecture for Diversified Internet" at WUSTL
- "Global Environment for Networking Innovations" (GENI): 29+ projects
- European Union: 7th Framework program
- Japan: AKARI (A small light in the dark pointing to the future)
- China, Korea, Australia, …20+ countries

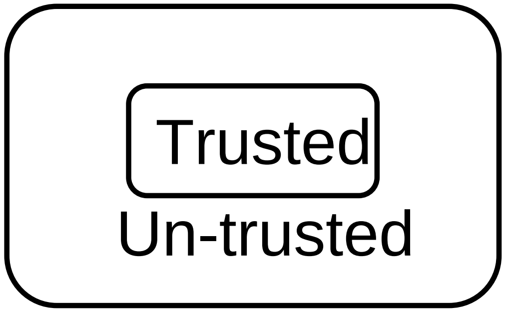
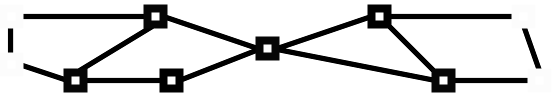
Key Problems with Current Internet

1. Security:
   Fundamental architecture design issue
   Control+Data are intermixed
   Security is just one of the policies.

2. No concept of ownership
   (except at infrastructure level)
   Difficult to represent organizational, administrative hierarchies and relationships. Perimeter based.
   Ÿ Difficult to enforce organizational policies

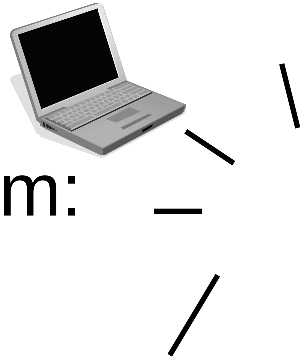




Realms

Problems (cont)

3. Identity and location in one (IP Address)
   Makes mobility complex.
4. Assumes live and awake end-systems
   Does not allow communication while sleeping.
   Many energy conscious systems today sleep.
5. No representation for real end system: the human.



Ref: R. Jain, ``Internet 3.0: Ten Problems with Current Internet Architecture and Solutions for the Next Generation,'' Proceedings of Military Communications Conference (MILCOM 2006), Washington, DC, October 23-25, 2006

Names, IDs, Locators

Name: John Smith

ID: 012-34-5678

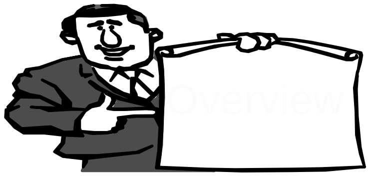
Locator:
1234 Main Street
Big City, MO 12345
USA

- Locator changes as you move, ID and Names remain the same.
- Examples:
  - Names: Company names, DNS names (Microsoft.com)
  - IDs: Cell phone numbers, 800-numbers, Ethernet addresses, Skype ID, VOIP Phone number
  - Locators: Wired phone numbers, IP addresses

Future Internet: Areas of Research

1. New architectures
2. Security
3. Content Delivery Mechanisms
4. Delay Tolerant Networking
5. Management and Control Framework
6. Service Architectures
7. Routing: New paradigms
8. Green Networking
9. Testbeds

Ref: S. Paul, J. Pan, R. Jain, "Architectures for the Future Networks and the Next Generation Internet: A Survey," Accepted for publication in Computer Communications, July 2010, 72 pp., http://www.cse.wustl.edu/~jain/papers/i3survey.htm



2. Internet 3.0

‰Internet 3.0: Next Generation Internet

‰Internet Generations

‰Organizational Representation

‰User- Host- and Data Centric Models

‰Policy-Based Networking Architecture

‰Multi-Tier Object-Oriented View

‰Virtualization

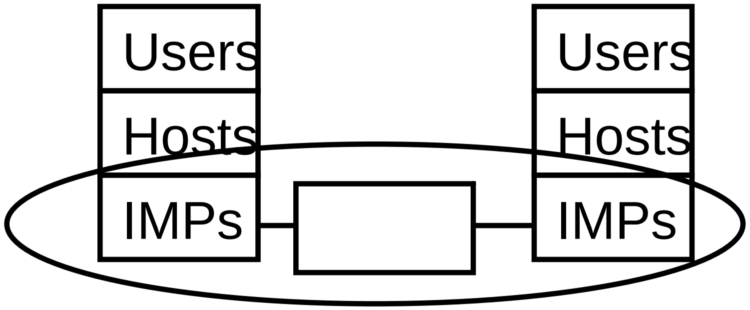
Internet 3.0: Next Generation Internet

- Internet 3.0 is the name of the Washington University project on the next generation Internet
- Goal 1: Represent the commercial reality of distributed Internet ownership and organization
- Goal 2: Develop a clean slate architecture to overcome limitations of the current internet
- Goal 3: Develop an incremental approach to implement the architecture

Internet Generations

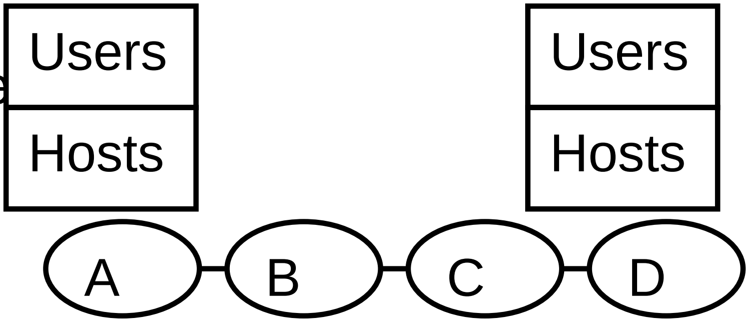
‰ Internet 1.0 (1969 – 1989)

- ¾ Single ownership Ÿ Trust
- ¾ complete knowledge
- ¾ Algorithmic optimality Ÿ RIP



‰ Internet 2.0(1989–2009) Commerce

- ¾ Multiple ownership of infrastructure
  Ÿ Distrust,Security
- ¾ No knowledge of internal topology and resources
- ¾ Policy based routing Ÿ BGP



‰ Internet 3.0(2009–2029) Commerce

- ¾ Users, Content, Host ownership
- ¾ Requirements, Service Negotiation
- ¾ Mobility of users and distributed data
